

# Zedua Experiments

## **Title:** Bubble Blowing

Colors and painting is always fascinating for little kids. This fun craft activity keeps the kids busy and active for few hours.

## **Materials Required:**

1. Light coloured paper
2. Water
3. Inks or poster paints (any water based paints designed for children to use)
4. Washing-up liquid
5. A little dollop of PVA glue is optional
6. Straws
7. Mugs/bowls/empty yogurt pots, etc.

## **Procedure:**

1. In each container mix a bit of paint or ink, a squirt of washing up liquid, water, and optionally a dollop of PVA.  
Note: Cover everything in newspapers as this activity can be very messy.
2. Fill the containers only so they're a third full, they will bubble up once the kids blow through the straws!  
**Caution:** Emphasise that the kids should blow through and not accidentally drink through. To make sure that they do not but making a pinhole in the straws may stop them being able to suck through it.
3. As the bubbles start pouring over the edges of the container blot them with the paper, but don't smudge otherwise the marks will be less defined.
4. This paintings dry very fast and they can build up layers of colour for an impressive print.
